State	Finished
Completed on	Tuesday, 18 August 2026, 7:55 PM
Time taken	4 mins 47 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int main() {
    int n, i, x;
    scanf("%d", &n);
    int arr[n];
    for(i = 0; i < n; i++)
        scanf("%d", &arr[i]);
    scanf("%d", &x);
    int low = 0, high = n - 1;
    while(low < high) {
        int sum = arr[low] + arr[high];
        if(sum == x) {
            printf("%d\n%d", arr[low], arr[high]);
            return 0;
        }
        else if(sum < x) {
            low++;
        }
        else {
            high--;
        }
    }
    printf("No");
    return 0;
}
```

	Input	Expected	Got	
✔	4 2 4 8 10 14	4 10	4 10	✔
✔	5 2 4 6 8 10 100	No	No	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
